

Observation - 1

1. Simple personal webpage.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title> Image - Link </title>
</head>
<body>
  <a href="https://www.target website.com">
    <h1> Your name </h1>
    <p> This is a brief bio about yourself. </p>
    Favorite website </a>
  </body>
</html>
```

Output: YOUR NAME

This is a brief bio about yourself
Visit my Favorite website

2. Image as a clickable Link

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title> Image Link </title>
</head>
<body>
  <a
    href="https://www.target website.com">
    
    </a>
  </body>
</html>
```

Output:

Image

3. Navigation Bar with unordered List

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title> Navigation Bar </title>
</head>
<body>
  <ul>
    <li><a href="home.html"> Home </a> </li>
    <li><a href="about.html"> About </a> </li>
    <li><a href="contact.html"> Contact </a> </li>
  </ul>
</body>
</html>
```

4. Student Grades Table

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title> Navigation Bar </title>
</head>
<body>
  <table border="1">
    <tr>
      <th ID </th>
      <th Name </th>
      <th Grade </th>
    </tr>
    <tr>
      <td>101</td>
      <td>John Doe </td>
      <td>A </td>
    </tr>
    <tr>
      <td>102</td>
      <td>Jane Smith </td>
      <td>B </td>
    </tr>
  </table>
```

```

<td>B</td>
</tr>
</table>
</body>
</html>

```

output:

ID	Name	Grade
101	JohnDoe	A
102	Janesmith	B

5. product information Table with monget tells

```

<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>product Table</title>
</head>
<body>
<table border="1">
<tr>
<th colspan="2">product
Name </th>
<th>price</th>
<th>quantity</th>
</tr>
<tr>
<td colspan="2">product A</td>
<td>$100</td>
<td>50</td>
</tr>
</table>
</body>
</html>

```

Output:

product Name	price	quantity
product A	\$100	50

6 Employee by Department Table with rowspan

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Employee Table </title>
</head>
<body>
  <table border="1">
    <tr>
      <th rowspan="3">Marketing </th>
      <td>Jane Smith </td>
    </tr>
    <tr>
      <td>Alice Johnson </td>
    </tr>
  </table>
</body>
</html>
```

output:

Department	Employee Name
	John Doe
Marketing	Jane Smith
	Alice Johnson

7 Frames with navigation and content

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Frame Layout </title>
</head>
<frameset cols="20%,80%">
  <frame src="navigation.html">
</frameset>
<frameset cols="20%,80%">

1. Analytical

1. Registration system

```

<html>
<html>mlns="http://www.w3.org/1999/xhtml"
<head>
<title> course Registration </title>
<style>
table, th, td {border: 1px solid black;
padding: 10px;
}
</style>
<script type="text/javascript">
function add course () {
var name = document.getElementById
var code = document.getElementById('course code
value
var instructor = document.getElementById "
if (name & code & instructor)
</table>
</body>
</html>

```

output

coursecode:

course name:

Add course

course code	course name
ece345	elec

2. Design a responsive blog layout using CSS. The layout should handle fast.

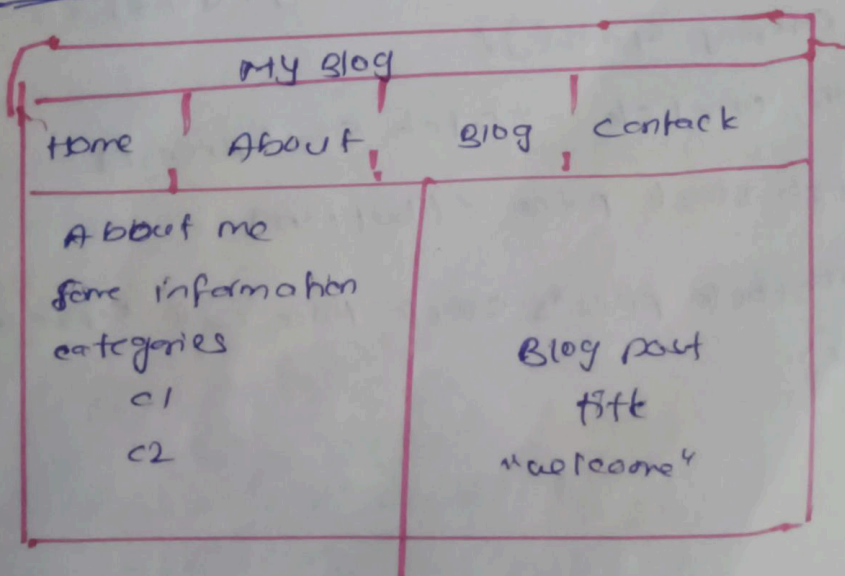

[Navigation Bar]

```

<html>
<head>
  <title>Blog Layout </title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <header>
    <h1> my Blog </h1>
    <nav>
      <a href="#home"> Home </a>
      <a href="#about"> About </a>
      <a href="#blog"> Blog </a>
      <a href="#contact"> contact </a>
    </nav>
  </header>
  <div class="container">
    <div> sidebar content </div>
    <div> main content area </div>
  </div>
  <footer> © copy 2024 My Blog & footer
</body>
</html>

```

Output:

3

Implement a real time stock price app.
The system should fetch and display stock.

```

<html>
<head>
  <title>Real time stock price viewer</title>
  <style>
    body {
      font-family : Arial, sans-serif;
      text-align : center;
      padding : 20px;
    }
    #stock-price {
      font-size : 20px;
      margin-top : 20px;
      color : #333;
    }
    input { type : "text";
      padding : 10px;
      margin-right : 10px;
    }
    button {
      padding : 10px 20px;
    }
  </style>
  <script>
    function fetchstockprice ()
    {
      const company symbol : document.getElementById
        By id ('stock symbol').value
      if (!company symbol) {
        <button onclick = "fetch stock price">
          fetch stock price </button>
      }
    }
  </script>
  <div id = "stock price"> stock price will appear
  </div>
</body>
</html>

```

output

Stock Price View
Enter stock symbol: AAPL
Current Price of AAPL: \$XXX.XX

4. Develop a shopping cart system using Java
The system should handle tasks such as adding items to cart

```

ut shopping cart = []
Function addItem cart (itemId, itemName,
itemPrice, itemQuantity) {
    const existingItem = shopping cart.
    if (existingItem) {
        existingItem.quantity + itemQuantity
        console.log('Updated $ {itemName}')
    } else {
        const newItem = {
            id: itemId
            name: itemName
            price: itemQuantity
        }
        shopping cart.push (newItem)
        console.log ('Added $ {itemName}')
    }
    updateTotal()
    addItemTo cart (1, 'Laptop', 999.99)
    addItemTo cart (2, 'SmartPhone', 499.99)
    addItemTo cart (3, 'Laptop', 99.99)
}
  
```

Output:

```

Shopping cart
Apple $1.00X$
[Remove Button]
Banana - $0.50X$
[Remove Button]
  
```

```

Apply Discount [Button]
Enter Discount code [Input field]
  
```

5

Developing a website for a local restaurant.
It should be smaller screens. HTML, CSS
code.

```
<html>
```

```
<head>
```

```
<title> responsive Restaurant </title>
```

```
<body>
```

```
<nav class="nav-bar">
```

```
<div class="logo">
```

```
<h1> Restaurant </h1>
```

```
</div>
```

```
<ul class="nav-links" id="navLinks">
```

```
<li><a href="#home" class="active">Home </a></li>
```

```
<li><a href="#menu" class="active">Menu </a></li>
```

```
<li><a href="#about" class="active">About </a></li>
```

```
</ul>
```

```
<div class="hamburger" id="hamburger">
```

```
<span></span>
```

```
</div>
```

```
</nav>
```

```
const hamburger = document.getElementById('hamburger')
```

```
y)
```

```
</script>
```

```
</body>
```

```
</html>
```

CSS

```
* {
```

```
margin: 0;
```

```
padding: 0;
```

```
body {
```

```
background-color: white;
```

```
color: white;
```

```
hamburger {
```

```
display: none;
```

```
cursor: pointer;
```

```
}
```

```
hamburger span {
```

```
background-color: white;
```

```
width: 25px;
```

```
height: 3px;
```

```
}
```

```
}
```

Output:

Responsive Restaurant

Restaurant

Home Menu About Contact

Hamburger

6. user Registration Form for a social networking website. The form should contain username, HTML code:

```
<html>
<head>
  <title>user Registration </title>
</style>
  error {color: red;}
  .form-group {margin-bottom: 5px;}
</style>
<body>
  <form id="registration">
    <div class="form-group">
      <label for="username">username
      </label>
      <input type="text" id="username"
        name="username" required
      </div>
      <button type="submit">Register </button>
    </form>
    <script>
      document.getElementById('regForm')
        .addEventListener('submit', function
          (event) {
            if (!id) {
              const email = document.getElementById
                ('email').value;
              const password = document.getElementById('password');
```

Output:

```
</script>
```

user Registration
